Command	ACLEAR

PURPOSE   Clear analyzer spectrum

PARAMETERS

ANLID   Analyzer identifier, may contain the "*" wildcard to select a
                  group of analyzers.
/LIST   List names of analyzers.

FUNCTION   All spectrum elements are set to zero.

REMARK   Analyzers, for which the property "PROTECTED" has been
                  attributed by the AGEN macro, the AGEN command or the
                  AMOD command, are not affected by this command. This is a
                  useful option for analyzers which store calibration information
                  that is not to be modified during accumulation of different input
                  files.

EXAMPLE   ACLEAR DELTA
                  Clear analyzer DELTA.

                  ACLEAR *
                  Clear all analyzers.

                  ACLEAR MASS(*)
                  Clear all elements of the indicated array of analyzers.
