

Command	FMY
PURPOSE	Specify user-defined fit function
PARAMETERS	
NAME	Name of user-defined fit function; for unique function it may be omitted.
NPAR	Actual number of fit parameters; will be prompted if omitted.
FUNCTION	The fit function is specified by a user-supplied routine "\$MYFIT", which is called for the first time to get starting values of the fit parameters.
REMARKS	Any number of fit functions may be defined in the resident procedure \$MYFIT, which is described in " HELP FITGEN ".
EXAMPLE	FMY OTTO 2
