

Command	AGET						
PURPOSE	List the value of a specific data channel of an analyzer						
PARAMETERS							
ANLID	Name of analyzer						
r1	Channel number in first dimension (x value).						
r2	Channel number in second dimension (y value, only for two-dimensional analyzers)						
FUNCTION	Extracts the content of one channel of the specified analyzer and lists it on the command window.						
REMARK	The channel number(s) correspond to the notation of the axes of a displayed analyzer. It includes an eventual calibration factor in x and y. (Note that the AGET macro does not include the calibration factor.) The command OIPAR may be used to store the result in a global parameter (see tutorial below).						
EXAMPLE	AGET TEST 325 List the value of channel 325 of the analyzer TEST.						
TUTORIAL	<p>Enter command: <u>AGEN</u> TEST / DIM(1) LIMITS(0,100) BINS(1)</p> <p>Enter command: <u>ASET</u> TEST = 55 / CHANNEL(50) Analyzer TEST set.</p> <p>Enter command: <u>AGET</u> TEST 50 55</p> <p>Enter command: <u>OIPAR</u> <I> Numeric result of preceding command stored into global parameter array \$R.</p> <p>Enter command: <u>IPOPER</u> C = \$R(1,1) <I> Parameter C created.</p> <p>Enter command: <u>IPAR</u> C / LIST</p> <table border="0"> <thead> <tr> <th>Parameter</th> <th>value</th> <th>comment</th> </tr> </thead> <tbody> <tr> <td>C</td> <td>55</td> <td></td> </tr> </tbody> </table> <p>Enter command:</p>	Parameter	value	comment	C	55	
Parameter	value	comment					
C	55
